

Offshore Consortium Esbjerg – a strong offshore alliance

In January 2007, 10 companies joined their forces and formed Offshore Consortium Esbjerg (OCE). The alliance is a result of the work of an ERFA-group within Offshore Center Denmark.

The companies forming OCE are all companies either represented by divisions in Esbjerg or with head quarters located in Esbjerg.

The purpose of OCE is to gather different offshore contractors with different disciplines in the solving of turnkey contracts making use of the experts available in the different OCE member companies. All companies each represents the competences and know-how necessary for the supply of complete offshore constructions as well as minor parts for the construction, components and services.

The OCE product range is wide: from production, processing, engineering, project management, purification, procurement, transportation, supply of components, storage to distribution. In general, everything any customer may need for their offshore activities whether it being large projects involving all of the member companies or small projects just involving one company.

Advantages of the consortium

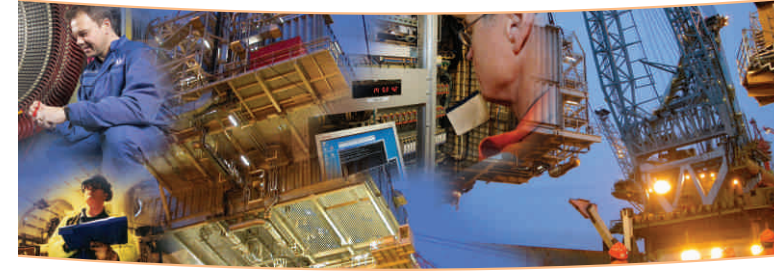

- customers are presented with custom-made solutions with focus on production optimization as well as cost-efficiency
- better use of the resources resulting in short term deliveries
- the use of experts with years of know-how and experiences improves the quality and standard of the solution as well as minimizes the risk of errors when different disciplines are involved
- one contact only for projects involving many different specialist areas

The member companies of OCE are all members of Offshore Center Denmark and are also registered at ACHILLES in Norway.
